1. The above figures are calculated based on the BIS standard applied on a consolidated basis under the "Standards for Determining the Status of Capital Adequacy in consideration of assets held by a bank holding company and by its subsidiaries, in accordance with Banking Law Article 52-25" (FSA Notice No. 20 of 2006 (the "Notice")). For the figures as of September 30, 2009 and 2010, we did not apply the exception to the Notice (FSA Notice No. 79 of 2008).

- 2. As it is not possible to break down Mizuho Financial Group's common stock and preferred stock according to classes of stock, non-cumulative perpetual preferred stock is not stated separately from capital.
- 3. In calculating the consolidated capital adequacy ratio, we underwent an examination following the procedures agreed with Ernst & Young ShinNihon LLC, on the basis of "Treatment in implementing examination by agreed-upon procedures for calculating capital adequacy ratio" (Industry Committee Report No. 30 of the Japanese Institute of

Certified Public Accountants). Note that this is not a part of the accounting audit performed on our consolidated financial statements. This consists of an examination under agreed-upon procedures performed by Ernst & Young ShinNihon LLC on a portion of the internal control structure concerning the calculation of the capital adequacy ratio and a report of the results to us. As such, they do not represent an opinion regarding the capital adequacy ratio itself nor the internal controls related to the calculation of the capital adequacy ratio.

4. The amounts of net deferred tax assets as of September 30, 2009 and 2010 were ¥615.1 billion and ¥447.0 billion, respectively, and the maximum amounts of deferred tax assets that can be recorded without diminishing the amount of Tier 1 capital for the purpose of calculating capital adequacy ratio as of September 30, 2009 and 2010 were ¥1,029.4

billion and ¥1,252.0 billion, respectively.

5. The "adjusted floor amount" is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the advanced internal rating-based approach and the gross profit allocation approach multiplied by the rate prescribed in the Notice over the required capital under the advanced internal ratings-based approach and the advanced measurement approach. The "adjusted amount for credit risk-weighted assets" is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the foundation internal ratings-based approach multiplied by the rate prescribed in the Notice over the required capital under the advanced internal ratings-based approach; and the "adjusted amount for operational risk equivalent" is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the basic indicator approach multiplied by the rate prescribed in the Notice over the required capital under the advanced measurement approach.

6. Among our group companies that were subject to the calculation of consolidated capital adequacy ratio pursuant to Article 3 of the Notice, the numbers of consolidated subsidiaries were 164 and 163 as of September 30, 2009 and 2010, respectively. There was no company that was subject to the deductions for total risk-based capital forth in Article 8,

Paragraph 1, Item 2, Subitem (a) through (c) of the Notice as of September 30, 2009 and 2010.

Notes:

- 1. We have changed the method of calculation of actual losses for the above table starting the period from October 1, 2009 through September 30, 2010. We also reflected such changes to the periods from October 1, 2008 through September 30, 2009 in the above table.
- 2. Actual losses are the sum of the net increase (decrease) in the amount of partial direct write-offs, specific reserve for possible losses on loans and general reserve for possible losses on loans (for claims against special attention obligors or below), etc., as well as tax-qualified direct write-offs, losses from sales of non-performing loans, losses from debt forgiveness and losses from debt-equity swaps during the relevant period. Equity exposure under the PD/LGD approach is not included in the amount of actual losses.

<Analysis>

Actual losses for the period from October 1, 2009 through September 30, 2010 decreased by ¥362.0 billion from the period from October 1, 2008 through September 30, 2009 to ¥101.8 billion. The decrease was due mainly to a significant decrease in losses from corporate exposure reflecting the improvement of obligor classifications through our business revitalization support to corporate customers.

■ Market risk

o Trading activities

The following table shows VaR (Value at Risk) figures of our trading activities.

			(Billions of yen)
	For the six months ended September 30,	For the fiscal year ended March 31,	For the six months ended September 30,
	2009	2010	2010
End of period	3.7	2.8	2.6
Maximum	4.3	4.8	3.4
Minimum	2.6	2.1	2.2
Average	3.4	3.1	2.9
The number of cases where assumptive losses exceeded VaR during the period	no case	no case	no case

Notes:

- 1. The multiplication factor for the calculation of market risk equivalent (internal models approach) is determined by the number of cases where assumptive losses exceeded VaR during the period.
- 2. Our group companies which conduct trading activities are Mizuho Bank, Mizuho Corporate Bank, Mizuho Trust & Banking and Mizuho Securities, etc.

VaR (Value at Risk)

The VaR method measures the maximum possible loss that could be incurred due to market movements within a certain time period (or holding period) and degree of probability (or confidence interval).

VaR related to our trading activities is based on the following:

- variance co-variance model for linear risk and monte-carlo simulation for non-linear risk;
- VaR: simple aggregation of linear risk and non-linear risk;
- confidence interval: one-tailed 99.0%;
- · holding period of one day; and
- historical observation period of one year.

o Outlier criteria

As part of the capital adequacy requirements under Basel II, the losses arising from a banking book in hypothetical interest rate shock scenarios under certain stress conditions are calculated and compared with the sum of Tier I and Tier II capital. If the interest rate risk of the banking book leads to an economic value decline of more than 20% of the sum of Tier I and Tier II capital, we will be deemed an "outlier" and may be required to reduce the banking book risk or adopt other responses.

The following table shows results of calculations under the outlier framework.

			(Billions of yen)
	Amount of loss	Broadly-defined	Loss ratio
		capital	to capital
As of September 30, 2009	695.3	7,630.0	9.1%
As of March 31, 2010	681.4	7,658.0	8.8%
As of September 30, 2010	936.1	8,180.7	11.4%
Effect of yen interest rate	613.4	n.a.	n.a.
Effect of dollar interest rate	231.7	n.a.	n.a.
Effect of euro interest rate	78.8	n.a.	n.a.

Note:

For the interest rate shock scenario used in connection with the calculations under the outlier framework, we generate annual rate fluctuation data for five years derived from daily raw historical interest rate data of the past six years and then apply the actual fluctuation data at a 99.0% confidence level to the shock scenario.
